

DISCHARGE SUMMARY

Singapore General Hospital – Department of Internal Medicine
Outram Road, Singapore 169608

PATIENT: Tan Wei Ming

NRIC: S7801234A

DOB: 22 March 1978

MRN: SGH-2025-041014

ADMISSION DATE: 10 April 2025 (09:45)

DISCHARGE DATE: 14 April 2025 (11:30)

WARD: Bunga Mas 6, Class B2

ATTENDING PHYSICIAN:

Dr. Chong Wei Liang

Specialist in Internal Medicine

SMC Licence: MCR-10234A

Singapore General Hospital, Dept. of General Medicine

PRIMARY DIAGNOSIS:

J18.9 – Pneumonia, unspecified organism

(Community-Acquired Pneumonia, moderate severity)

SYMPTOM ONSET:

Patient reported onset of productive cough, fever (38.8°C), and dyspnoea approximately 3 days prior to admission.

Estimated symptom onset date: 07 April 2025.

HISTORY OF PRESENTING ILLNESS:

Mr. Tan Wei Ming, a 47-year-old male, presented to the SGH Emergency Department on 10 April 2025 with a 3-day history of productive cough, high-grade fever (38.8°C), and worsening shortness of breath. He had no significant past medical history and was not on regular medications. SpO2 on admission was 91% on room air.

INVESTIGATIONS:

- Chest X-Ray (71046): Bilateral lower zone consolidations consistent with pneumonia. (10 April 2025)
- Full Blood Count: WBC $14.2 \times 10^9/L$ (elevated, consistent with bacterial pneumonia)
- C-Reactive Protein: 112 mg/L (elevated)
- Blood cultures: No growth after 48 hours

TREATMENT:

- IV Amoxicillin-Clavulanate 1.2g q8h x 4 days
- Supplemental O2 therapy (nasal cannula, 2–4 L/min)
- Inpatient physician review daily (CPT 99232 x4)
- Physiotherapy for chest clearance

CLINICAL COURSE:

Patient showed clinical improvement by Day 3. Fever resolved on Day 2. SpO2 improved to 97% on room air by Day 3. Tolerating oral feeds and ambulating independently by Day 4.

DISCHARGE CONDITION:

Stable. Apyrexial. SpO2 97% on room air.

DISCHARGE MEDICATIONS:

- Amoxicillin-Clavulanate 625mg PO TDS x 5 days
- Paracetamol 500mg PRN for fever

FOLLOW-UP:

Review at SGH General Medicine Outpatient Clinic in 2 weeks.
